

IN THE CLAIMS:

Please amend claims 1, 2 as follows:

B2

1. (Amended Three Times) An apparatus for displaying registered information using embedded data, comprising:

- an image capture device for capturing an image of a substrate having visible data and embedded data embodied thereon;
- a decoder for decoding the embedded data to develop registration information;
- a device for retrieving second information from a storage location identified by the registration information; and
- a display for displaying the second information.

2. (Amended Three Times) A method for displaying registered information using embedded data, comprising:

- capturing an image of a substrate having visible data and embedded data embodied thereon; and
- displaying information retrieved from a storage location identified by the decoded embedded data.

REMARKS

The Examiner's Official Action dated April 9, 2002 has been received and its content noted. Claims 1-6 were pending prior to this amendment. This amendment amends the specification to incorporate the application number of related cases. This amendment also
